all feedback is welcome!

norlang{

this artificial language is called norlang(Normal Language) in english.

advertisement{

norlang will become the international language.

norlang dont have exception.

over 65% of words is compound word or antonym or arranged in an orderly way.

so you can remember words easily.

one sentence has only one meaning.

ex 'A and B of C' can be interpreted as '(A and B) of C' and 'A and (B of C)' in english.

but in norlang, 'af C bf A B' mean only '(A and B) of C'.

'bf A af C B' mean only 'A and (B of C)'.

'i know you' in norlang is 'nmegbd'.(This is pronounced differently from English.it is easy to pronounce)

english is 80bit(in ascii code).

norlang is 24 bit(one letter is 4bit).

norlang is three times more efficient than English.

so norlang reduces environmental pollution.

norlang helps easy communication.

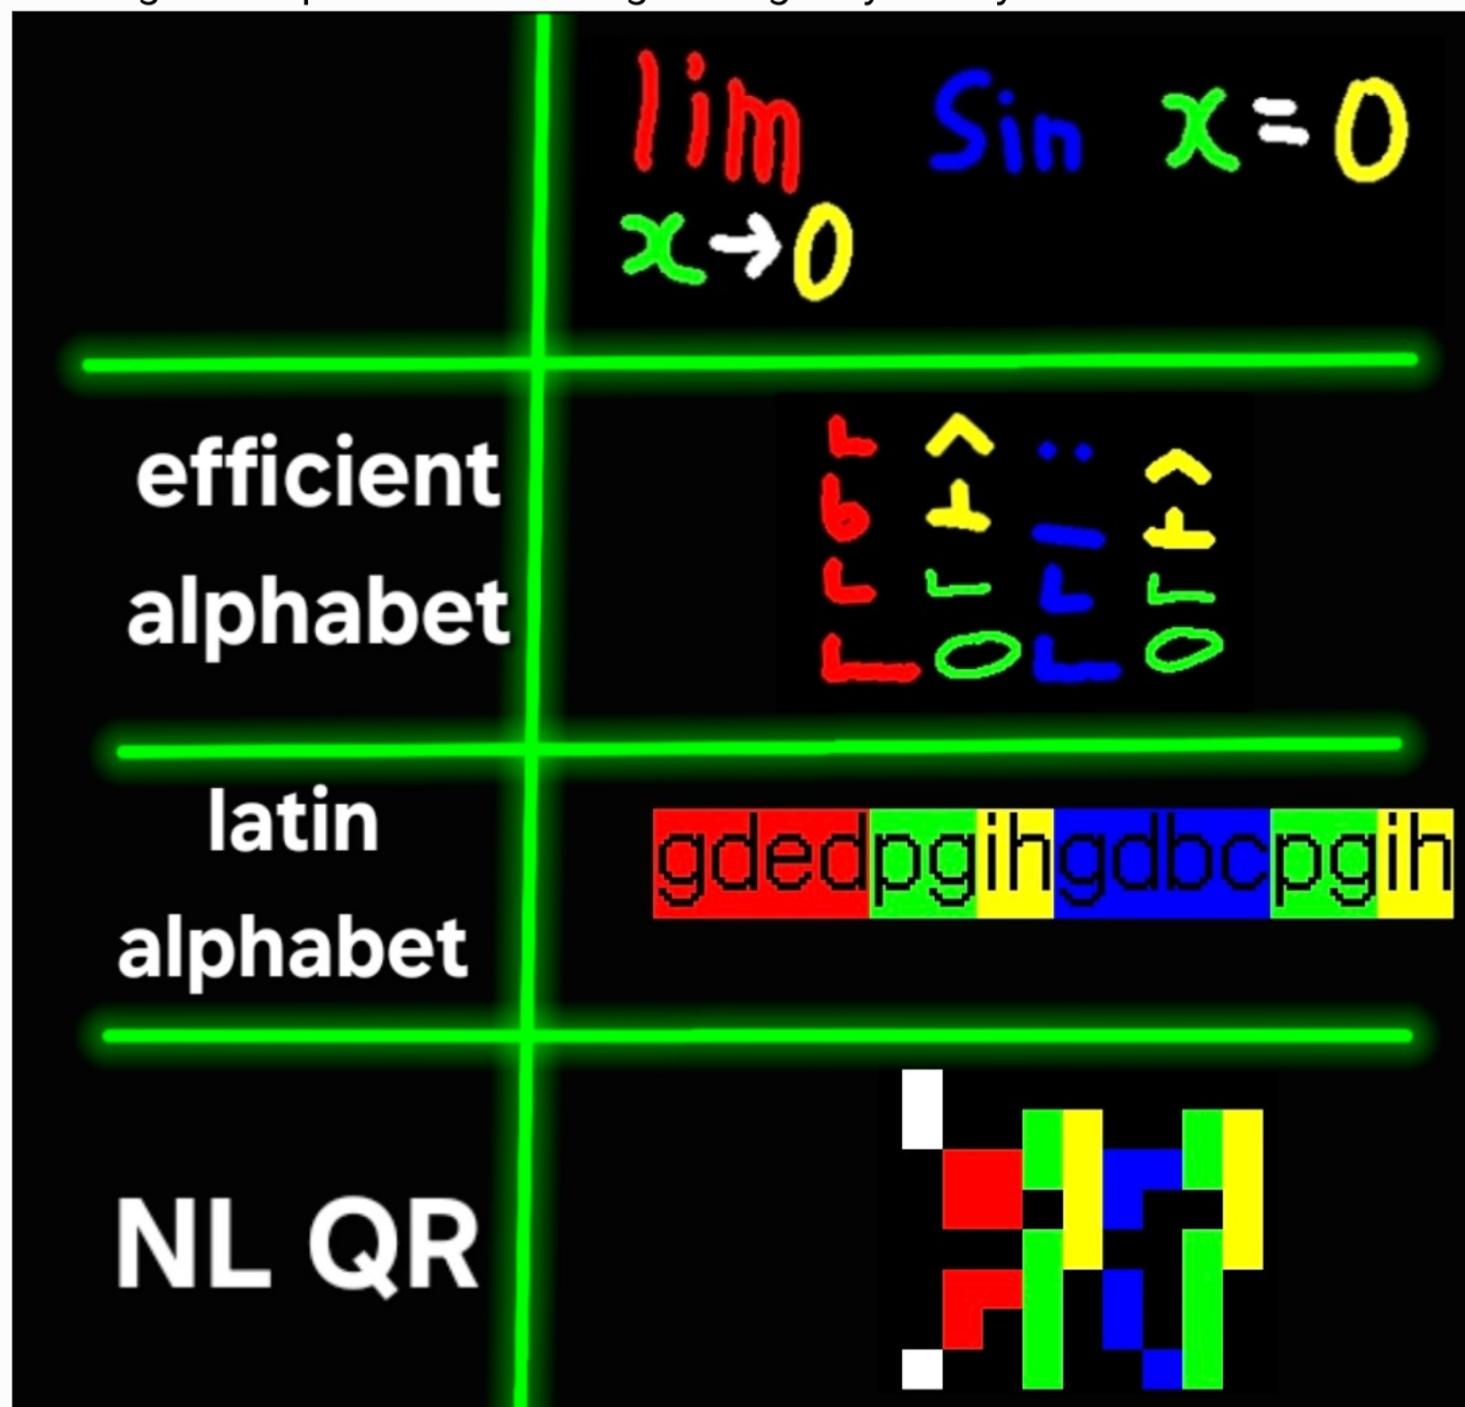

norlang brings peace and helps technology grow.

norlang is phonetic script.

norlang versions of barcodes and QR codes is called NL QR.

Since norlang is a binary language, it can easily be converted into NL QR and and norlang version morse code.

norlang can express all meanings using only binary.

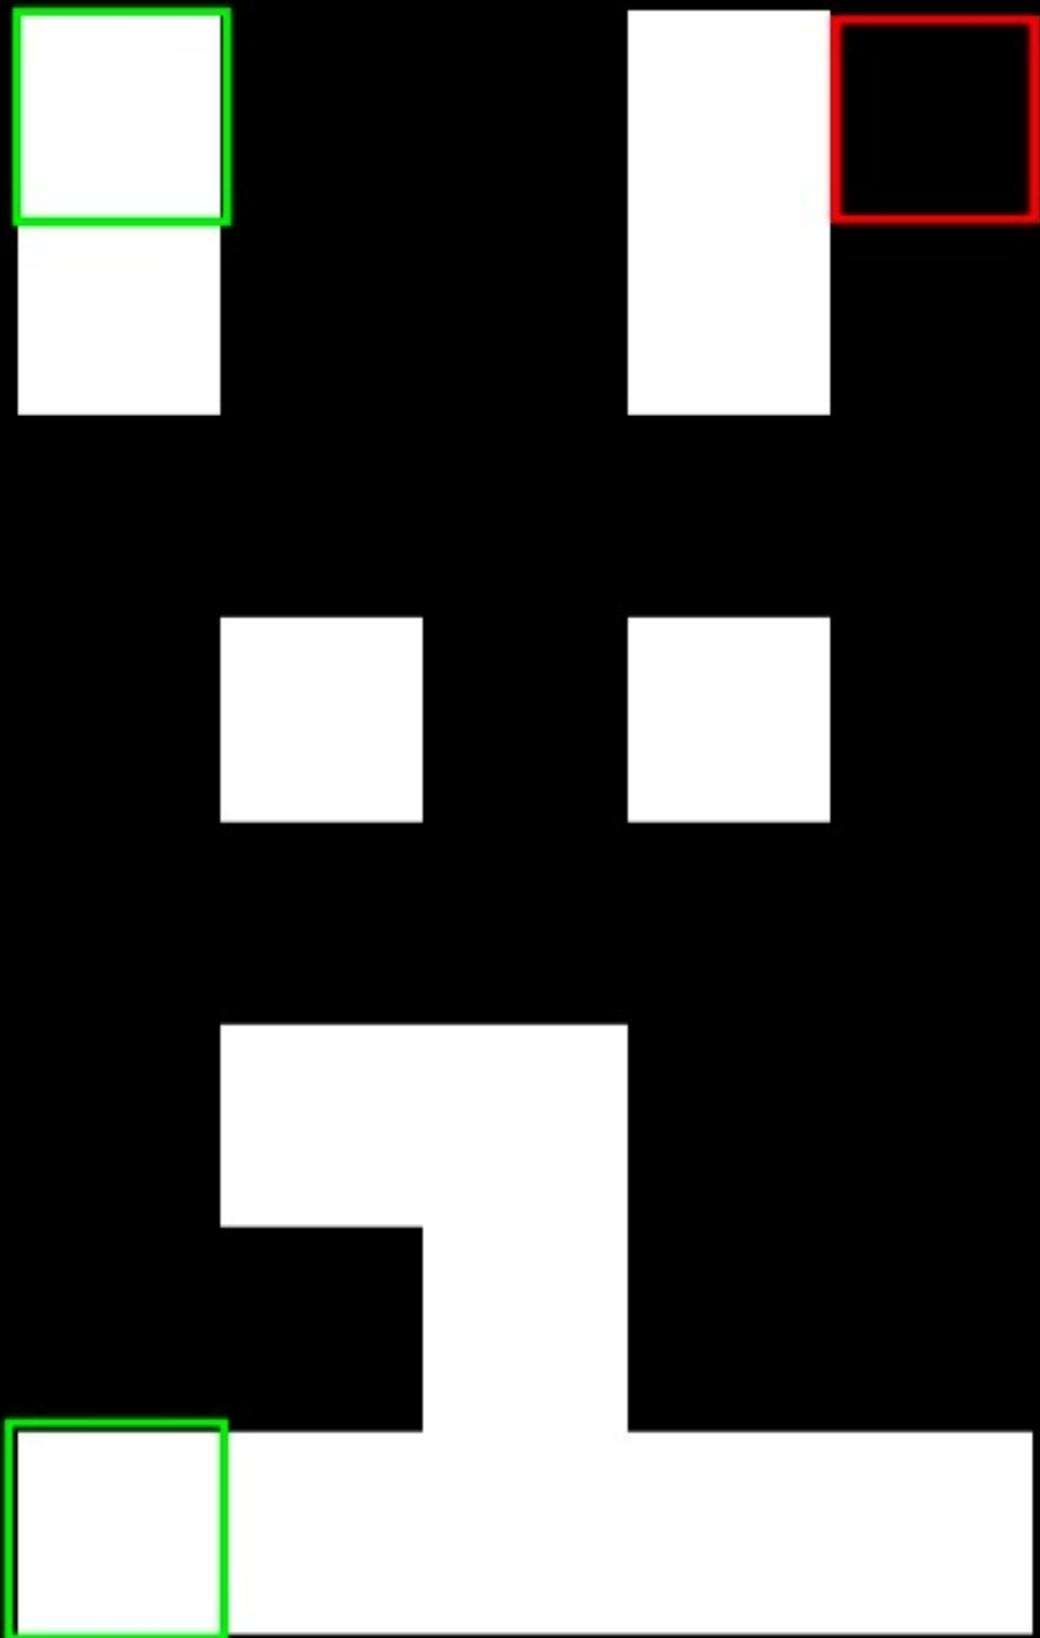

NL QR1 is over 1.5 times more efficient than a barcode.(both image mean same)

NL QR2 uses over 5 times less space than a QR code.(the both image mean 'i am people')

NL QR means the same from any angle like QR code.

vertex that should be black(0).

vertex that should be white(1)

NL QR can be expressed in one, two, or three and more dimensions(pdf

user can see image).

1d

2d

3d

you can use norlang fluently in just one month

It is the simplest, most efficient, easiest and most logical future international language.

norlang can be used in programming.

it is called ECL.

}advertisement

alphabet{

alphabet is only 0 and 1 then it can be expressed as 16 latin letter.

a:0000. b:1000. c:0100. d:1100.

e:0010. f:1010. g:0110. h:1110.

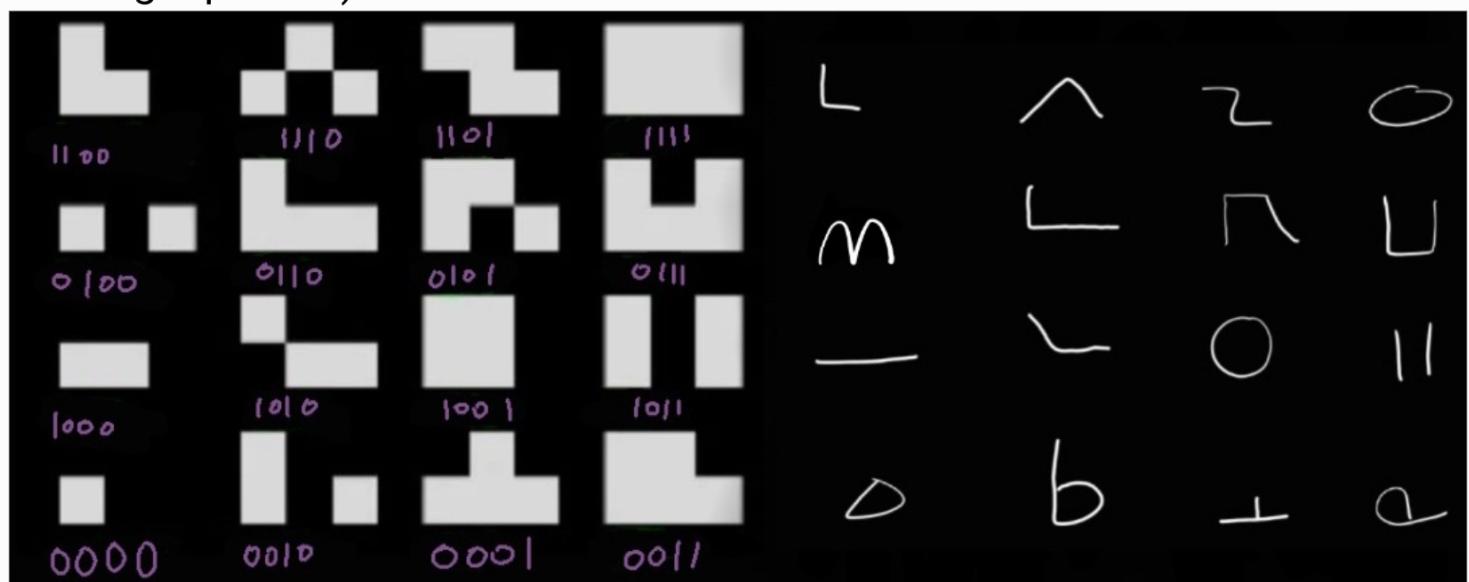

i:0001. j:1001. k:0101. l:1101.

m:0011. n:1011. o:0111. p:1111.

norlang uses only lowercase letters.

more efficient alphabet is here(only pdf user can see. bottom to top

writting alphabet):

8n-th bit determines length of word.

a word whose 8n-th bit is 1 make the word consist of more bit.(ex sentence '{0000101(1)0110000(0)}{0111000(0)}' consist of two words.

between '(' and ')' is 8n-th bit.

between '{' and '}' is one word.)

it means that word whose 2n-th letter is between 'a'(0000) and 'h'(1110) consist of smaller quantity bits.

the example converted to latin letter is 'anga oa'.

so it deosnt need whitespace cuz the 8n-th bit 0 plays the same role as whitespace in English.

but ill use whitespace to make you easily understand.

pronunciation{

Two letters make one syllable.

The (2n-1)th letter is pronounced as initial consonant.

and the 2n-th letter is pronounced as vowel also final consonant.

ex 'fc ee anba' is pronounced as 'neo da maemboo'.

(2n-1)th letter 'f' is pronounced as 'n'.

2n-th letter 'c' is pronounced as 'eo'.

(2n-1)th letter 'e' is pronounced as 'd'.

2n-th letter 'e' is pronounced as 'a'.

then 'anba' is pronounced as 'maemboo' then it can be pronounced as 'maeb'.

pronunciation chart{

sound consists of decibels (dB) and hertz (Hz).

it is arranged with lower Hz sounds coming first.(ex m(100hz) < s(14000hz))

so it is not biased toward any specific culture.

a:'moo'. b:'bo'. c:'leo'. d:'geu'.

e:'da'. f:'nae'. g:'kki'. h:'ttwo'.

EML(Efficient Memory Language){

lecture{

basic{

grammar of norlang is same as math.

transitive verb is function.

object is parameter.

norlang dont use be verb.

norlang use VOS word order.

norlang sentence 'A B' mean 'B is A'.

structure of norlang sentence is list of two objects.

'djca aoad' mean 'ore is solid'.

'djca' mean 'solid'.

'aoad' mean 'ore'.

some word must have parameter like function.

'mmfd oa oa' mean 'i love me', 'thing that love me is me'.

'mmfd' is function that must have parameter.

'mmfd oa' is one object cuz mmfd is function.

'mmfd oa' mean 'thing that love me'.

'oa' mean 'i'.

if subject is omitted, subject is 'i' so 'i love me' is expressed as sentence 'mmfd oa' and 'mmfd oa oa'.

this grammar can express every meaning.

ex 'The happy boy gives her a small book in the morning and smiles.' is expressed as '**ab gb if ab dmkg pf bida mlmb kjkc** ac ajfg ajea ab dmdg boob'.

To learn in detail, you need to know how to interpret a dictionary.

<How to interpret a word dictionary>{

'fojb r!=dead thing.'{

word is expressed as it in word dictionary.

far left is norlang word.

far right is meaning of this word.

between norlang word and '!' is word type.

'r' is an abbreviation for 'real'.

only thing that can exist in reality is real type object.

}

'kjgg r!=alive thing.//anto die'{

'//' is for an additional explanation.

'anto' is an abbreviation for 'antonym'.

'anto A' mean 'this word is antonym of A'.

The antonym form is the inversion of the original word's bits.

0 becomes 1. 1 becomes 0.

ex antonym of 'fojb'(10100111,10011000) is 'kjgg'(01011001,01100110).

}

'jd r!o=thing that think A.'{

between '!' and '=' is parameter that this function must have.

'o' is an abbreviation for 'object'.

any object can be in object type parameter.

capital letter in far right is input value of parameter of this function.

ex 'jd oa' mean 'thing that think me'.

function in parameter have parameter.

}

'pc si!=continue speaking.'

'si' is abbreviation for 'sign'.

'si' type word dont interface all words.

ex sentence 'eb pc anga oa' mean 'eb anga oa' cuz word dont interface 'si' type word.

You can use 'pc' word to continue what you were saying before.

}

}<How to interpret a word dictionary>

any word can be in object type parameter.

'jd oa' is one object.

'jd jd oa' is one object and mean 'thing that think thing that think me'.

'jd ad oa'='i think', 'thing that think something is me'{

ad si!=symbol that omit one parameter.

paramrter of jd is omitted by ad.

}

'fmeg'='hello', 'thing that greets is me'{

fmeg r!o=thing that greets A./pron de ade,.

subject is omitted so subject is 'i'.

the example sentence mean 'i am thing that greets'.

}

'higina coea oa'='my name is higina', 'higina is name of me'{

coea v!o=name of A.

}

}basic

intermediate{

<How to interpret a word dictionary>{

'fc r!o,o=thing that ask B about A.'{

'!A,B' mean this function need 'A' and 'B' as parameter.

A is first parameter of norlang word, the second one as B, and then C, D, E, F, and so on.

parameter that this function must have is object and object.

ex fc bd mean thing that ask oa about anga.

}

'ha p!o=this A'{

'p' is abbreviation for 'parameter'.

parameter value determines type of this function.

ex 'ha fojb' is number cuz fojb is real type object.

}

'ka 2p!o-o-n=thing that become B using A.'{

'2p' mean '2rd parameter'.

type of object in 2rd parameter value determines type of this word.

ex type of 'ka oa kjgg' is real type object cuz 'kjgg' is real type object.

The symbol '-' means that if the **parameter** is omitted by symbol that omit parameter, the **next parameter** is omitted too.

ex 'ka ad'

'ka' have three parameter but all parameter of ka can be omitted by

}

'oa r!=i./com express,this,symbol that omit parameter.'{

'com' is an abbreviation for 'compound word'.

'com A,B' mean 'this word is compound word of A and B'.

'oa' is compound word of 'kb' and 'ha' and 'ad'.

'kb ha ad' mean 'thing that express this'.

length of all that words is 24bit.

but i want to express word 'i' as 8bit word cuz word 'i' is used a lot.

The floor of 8 divided by 3 is 2.

2bit is from 'kb'(01,011000).

2bit is from 'ha'(11,100000).

4bit is from 'ad'(0000,1100).

result is 'oa'(01,11,0000).

}

'anga r!=people./pron de mensch'{

'pron' is an abbreviation for 'pronunciation'.

'pron de mensch' means that the pronunciation of this word is derived from the German word 'mensch'.

'de' mean german in ISO code alpha2.

}

'gb p!s-n=reason why A2 is A1'{

's' is an abbreviation for 'sentence'.

's' is 'o-o'.

so 'A1' is first 'o'.

'A2' is second 'o'.

}

}<How to interpret a word dictionary>

'ka af oa bode dmea bd'=i see you using my eye', 'thing that become thing that see you using eye of me'{

ka 2p!o-o-n=thing that become B using A.

af 2p!o-o=B of A./com also,element-of,.

bode r!=eye./com body,see,.

dmea r!o=thing that see A./com sense,light,

}

<how to ask>{

'fc anga bd'=what is people? i ask you', 'thing that ask you about people is me'.{

fc r!o,o=thing that ask B about A.

}

'fc ne bd'='where are you?, i ask you', 'thing that ask you about location of you is me'{

ne v!o=location of A.

if parameter of 'fc' is omitted, the parameter mean 'you'.

}

'fc gb dnofd oa bd'='why do you hate me?', 'thing that ask you about reason why thing that hate me is you is me'{

gb p!s,n=reason why A2 is A1.

dnofd r!o,n=thing that hate A./com dread,normal,

if second parameter of 'fc' is omitted, it is 'you' or 'i'(alone think).

'gb dnofd oa bd' mean 'reason why you hate me'.

}

'fc jc dne noba bd'='what if you give up being worker?', 'thing that ask you about what happens if thing that give up being worker is you is me'{

jc p!s,n=what happens if A2 is A1.

dne r!o=thing that gave up being A.

noba r!=worker.

}

'fc ja dmea oa bd'='are you looking at me?', 'thing that ask you about whether thing that see me is you is me', {

ja r!s=whether A is true.

dmea r!o=thing that see A./com sense,photon,.

}

'fc ec gjkb ha anga boba'='how do we save this person?', 'thing that ask you about how we become thing that save this people is me'{

ec r!s-n=how A2 become A1.

gjkb r!o,n=thing that save A./com reason,alive,.

ha p!o=this A.

boba r!=we./com and,i,you,o,.

}

'fc ee de id boba'='when we sense each other?', 'thing that ask you about time when thing that sense each other is we is me'{

ee t!s=time when A2 is A1./com what,thing that be B when A,

id r!=each other./com what,interface,self,.

}

}<how to ask>

time{

'**jb gjfg anga** oa', '**jb gb fojb anga** oa'='i killed people', '**thing that was thing that kill people** is me'{

jb p!o=thing that was A.

gjfg ow,n=thing that kill A.//com reason,die,,

eida o!=that.

gb p!s,n=reason why A2 is A1.

fojb r!=die.

'gb fojb anga' means 'reason why people is die'.

}

'**gc gjfg eida** oa'='i will kill that', '**thing that will be** **thing that kill** **that is me**'{

gc p!o=thing that will be A.//anto was A.

}

'**eb jb fojb oa**'='i have never died', '**thing other than** **thing that was** **dead** **thing** **is me**'{

eb v!o=thing other than A.

jb p!o=thing that was A.

}

}time

<symbol that omit parameter>{

'fc ad bd'='thing that ask you about something is me', 'i ask you'{

ad si!=symbol that omit one parameter.

bc si!=symbol that omit two parameter.

cc si!=symbol that omit three parameter.

dc si!=symbol that omit four parameter.

omitted parameter become mean 'something'.

}

'dnfd bf bd dnfd bd bc oa'='i hate you and thing that hate you'{

dnfd r!o,n=thing that hate A.

bf p!c o=A1 and A2 and....

in this situation

it should omit two parameter so 'bc' is used instead of 'ad'.

the first omitted parameter is 2th parameter of 'dnfd'.

second is for finish 'bf'.

}

}<symbol that omit parameter>

how to command{

'be alive!'='fa kjgg'{

fa r!o,o=thing that orders B to become A.

kjgg r!=alive.//ant die

}

}how to command

'kjge fleg'='i speak fleg'{

kjge r!o=thing that speak A.//com express,sound,.

fleg=norlang,//com normal,language,.

}

"='im from'{

}

'mmfd bd oa', 'me fd bd oa'='i love you', 'thing that love you is me'{

mmfd r!o,n=thing that love A with B percent intensity, //com hope,normal,

me r!s,n=thing that hope A2 is A1 true with B percent intensity.

fd r!=normal,

'me fd bd' mean 'thing that hope you are normal'.

}

}intermediate

upper intermediate{

<How to interpret a word dictionary>{

'bf p!c o=A1 and A2 and....'{

'c o' mean 'this word have object type parameter until it met symbol that omit parameter'.

'A1' is first parameter.

'A2' is second parameter.

ex 'bf oa oa oa ad' mean 'me and me and me'.

}

'ih n!=0'{

'n' is abbreviation for 'number'.

}

<how to use 'ea'>{

'mmfd bd oa', 'bd ea mmfd oa'='i love you'{

first sentence mean 'i love you'.

second sentence mean 'what i love is you'.

'ea' is similar to 'what' of english.

}

'fc ad bd', 'bd ea kh fc'='i ask you'{

To know the meaning, you need to list the parameters of all words in sentence of parameter of the 'ea'.

ea v!c n,s=what./ea remove targeted parameter by A.

'kh' is not in sentence parameter of 'ea'.

'ea kh fc' mean 'second parameter of 'fc' ' cuz 'kh' is 2 in situation that dont need minus.

}

'nmeg bd oa', 'bd ea nmeg pa oa'='i know you'{

first sentence mean 'i know you'.

second sentence mean 'what i know is you'.

The 'pa' is where 'bd' originally was.

}

'ea mmfd bd'='ea jh mmfd bd'='ea mmfd pa bd'{

}

'ae anga mmfd oa'='people that i love'{

ae p!o-<c n,s>=A that C2 C1(verb)//com also,what,,C1 is verb.

}

}upper intermediate

advanced{

<How to interpret a word dictionary>{

'bg n!int=integer'{

'int' is an abbreviation for 'integer'.

'int' is for expressing only integer.

so it dont make parameter.

'bg' express integer number.

ex 'bg he' is 35.

first bit determines whether the number is positive or negative.

if first bit is zero, number is negative.

integer 'he' is '111000010'.

(2nd bit)*1=1.

(3rd bit)*2=2.

(4th bit)*4=0.

(5th bit)*8=0.

(6th bit)*16=0.

(7th bit)*32=32.

1+2+32=35.

so it is 35.

}

'if p!o=thing that have A.//ant element'{

he p!o=element of A.

'if' is '0 0 0 1 1 0 1 0'.

'he' is '1 1 1 0 0 0 1 0'.

antonym of 'he' seems 'id'.

antonyms have an order.

An element must exist for the owner to exist.

so word 'element' consists of lower bits than 'have'.

then antonym of 'he' seems 'ih' but 'ag'~'ph' is for number.

word like 'element' is called 'former word'.

'gidd o-o-n=thing that should be A to be B, //need,also,self,'{

gljb o-<o,n>=thing that need A to be B.

ab r!o-o=A also B. //com be, and,.

dd c=self.

The floor of 16 divided by 3 is 5.

But the length of element word in the compound word must be a power of 2.

}

}<How to interpret a word dictionary>

'ag'~'ph' is number word.

'bg da', 'lh'='1'{

'bg da' is '10000110,11000000'.

'lh' is '11011110'.

and see between '(' and ')' in next.

'bg da' is '10000110,(110)00000'.

'lh' is '(110)11110'.

'ih'~'ph' is 'eni'(efficient number integer).

}

'cb kh fojb'='two dead thing'{

in original, 'kh' is '-1' but the quantity cannot be negative.

so in situation that dont need minus, it become positive integer.

so 'kh' become 2.

in original, 'ih'(0,00,11110) is '0'.

'kh'(0,10,11110) is '-1',

'lh'('1,10,11110') is '1'...

'ph'(1,11,11110) is 3.

in situation that dont need minus, 'ih' is '0',

'jh' is '1',

'kh' is '2'...

'ph' is '7'.

}

'cbfojb'='quantity of dead thing'{

}

'dg fa jh'='1.25'{

dg n!int-n=real number.

'fa jh'='10100000.10011110'.

'fa' is in decimal area.

'jh' is 4 but in situation that dont need minus, number become positive.

}

'cb v!n,n,o=A B.'{

example of 'number' + 'word' in english is 'one apple'.

ex 'cb ih anga' mean 'zero people'.

ih=0.

If different type word like 'r' is in place of an 'n' type parameter, then 'n' is automatically omitted.

if parameter 'n' of 'cb' is omitted, function 'cb' return quantity.

ex 'cb anga' mean 'quantity of people'.

you can omit number type parameter to express quantity of number using symbol that omit parameter.

ex 'cb ad ih' mean 'quantity of 0'.

}

}<number>

<mathematical expression>{

'mmfd cd ph='i love you with 100percent intensity'{

number{

'x1000010'

if x is 0,minus.

if x ia 1,plus.

before bit is small.

it is eficency.

10000000=+0.

11000000=+1.

01000000=-1.

}number

reading way in NL QR{

in 1 dimension, '10' is at first for expressing reading direction.

in other dimension,it is

'10000011'.

or

'1011000000000011'

read like  

rows should not 8,

}reading way in NL QR

for developer{

The efficiency of inaccurate expressions and accurate expressions should be similar to same.

pronunciation chart order is low herz->high herz.

exact expression is important than efficiency.

one sentence must mean only one mean.

purpose of language is only communication and efficient.

0 cannot be used for counting order.

exception should none.

relative things must have standard.

sentence 'people i' means 'i have over 70% of features of people'.it is called 'ratio word'.

10.arrangement order of word is 'number->most common->'.

word formation rule{

word that need parameter{

1:meaning of word whose parameter is all or nothing is what other word can express.

2:relative word.

transitive verb.

test sentence{

input word your wonder to @.

Forgotten @ repeats itself.(ex history word dont need parameter. try input

history of. is it owe?)

people in @ love you.

There should be no discrimination based on @(that is features of discrimination word. so 'element of all' word legal)

}test sentence

}word that need parameter

antonym{

bit of antonym is inverse of original word so 0 become 1, 1 become 0.

word that should come first{

priority-est is

1.low number:can(0%)->cant,

2.original:desire()->desire(not).

3.many quantity:women is manier than men.

}word that should come first

if specific word have lot of antonym, created by antonym mechanism is 'root(no slave,no king)->number(0% can=cant)->purpose(weapon,treatment tool,,intend,evolution)->diffrence set(dont know,know)'.

}antonym

compound word{

1.'know' is 'have+'information-of'.

2.'girlfriend'='girl'+'love' cuz original is 'wae'+'girl'+'love'+'omit gramr'.it should keep word order.

3.'teethbrush'='teeth'+'brush'.

4.phonetic loanword:'russia'->'romsimna(russia in russian. slient consonant become 'n').
'higgs particle'->'(kims('h'->'k')).

if new compound word overlap with other compound word,element word of new compound word become small.(ex '00,10' become '01'. then if area of element is too small, use XOR).

length of bit of element of compound word must power of two.

if length of bit of element of compound word is not power of two, element of compound word such as symbol that omit grammar, ea, of, and, or, also is omitted to be power of two.

small bit word is first in situation whose order doesn't matter.

}compound word

}word formation rule

}for developer

}rule

other{

if norlang have problem norlang is changed never mind other.

}OVS

VOS{

efficient what

}VOS

Reverse Polish Notation (RPN) offers advantages over Polish Notation (PN) primarily in processing and storage efficiency, particularly in calculator implementations and compiler design. RPN simplifies the evaluation process by using a stack-based approach, requiring less complex logic and potentially reducing memory usage compared to PN. Additionally, RPN can be more efficient for complex calculations and is less prone to errors when entering equations
