►norlang{

This artificial language is called Norlang (Normal Language) in English.

►Persuasion{

summary: norlang is easy and most efficient and logical and unambiguous binary language that can express all meaning so it can easily be converted into morse code and QR code and barcode and braille and sign language so it help all communication. this language have lot of advantages so it can become International Auxiliary Language. norlang reduces environmental pollution.

most words are not randomly made.

lot of words is compound words.

eg word 'hnmc' mean music.(norlang use phonetic script but norlang is pronounced differently from english and it is easy to pronounce.)

word 'hnmc' is compound word of sound and pleasure.

word 'bomc' mean sports.

it is compound word of compete and pleasure.

lot of words is abbreviations.

eg word 'od' is abbreviation for Oa(this) and Doea(time).

lot of words are arranged in an orderly way.

eg bihd mean hydrogen(Atomic number 1). cihd mean helium(Atomic number 2). dihd mean lithium(Atomic number 3). eihd mean beryllium(Atomic number 4).

so it help technology grow cuz it make science easy.

Word that have similar meanings consist of similar letters.

eg mkfd mean love. mkid mean like. mkcd mean pleasure so you can easily guess the meaning of abbreviation you see for the first time.

lot of words is antonyms.

'ed'(0010.1100) mean 'was'.

'le'(1101.0010) mean 'will' and it is antonym of word 'was'.

the bits is reversed.(8n-th bit didnt reversed since it play role of whitespace in english)

length of most words are short.(2~4letters) so you can easily remember words.

grammar is simplest and very logical and consistent so norlang can be used in programming.

eg javascript code 'var gh=1==2; console.log(gh);' is expressed as 'ja lh nh gh elba gh'. grammar didnt be changed.

if you learn a little grammar, then you can explain every meaning, regardless of your native language.

norlang dont have slang.

norlang dont have all ambiguous.

eg in english, "A of B and C" can be interpreted as

"(A of B) and C" and "A of (B and C)".

but in norlang, "be af A B C" means only "(A of B) and C".

'af A be B C' means only 'A of (B and C)'.(it is like prefix notation)

word think have three meaning it is imagine and believe and ponder so word for think is not exist in this language.

unambiguous is very good for language cuz it make efficient cuz it doesn't need any additional explanation or images to explain exactly.

Norlang doesn't have exceptions.

norlang version of barcodes is exist and it is called NL QR1.

NL QR1 is most efficient 1D code.

it is usually four times more efficient than barcode.

barcode use 145cell to mention 'i am person' but NL QR1 use 28cell.

NL QR1

barcode

norlang version of QR code is exist and it is called NL QR2.

NL QR2 is most efficient 2D code.

NL QR2 is usually over 4 times more efficient than a QR code.

NL QR2

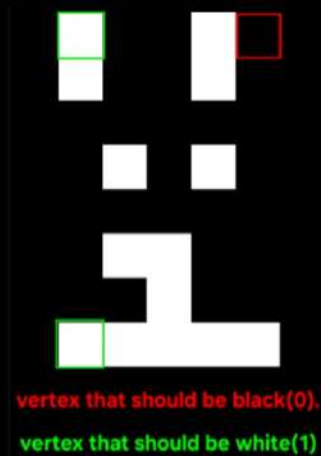

QR code

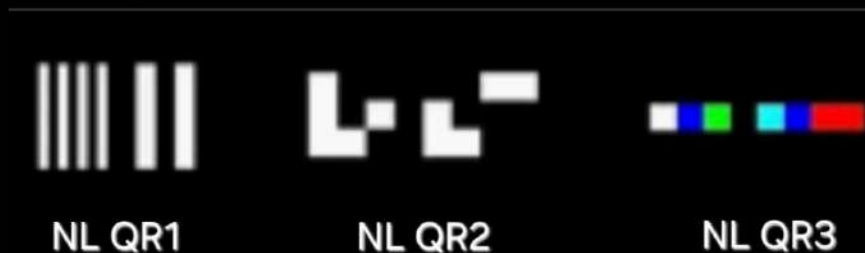

eg QR code use 441cell to mention 'i am person' but NL QR2 use 32cell.

NL QR mean NL QR1, NL QR2, NL QR3.

meaning of NL QR is Not affected by direction, like a QR code.

NL QR3 is most efficient code.

NL QR can help cheating in exam because it is human-readable. it takes up little space and most people won't think of it as a language, so it won't get caught.

norlang version of morse code is exist and it is called NL morse.

NL Morse is usually two times more efficient than Morse code.

morse code cant explain mathmatical expression

but NL morse can express all meaning.

norlang version of braille is exist and it is called NL braille.

NL braille is usually 1.5 times more efficient than braille.

original Braille is ambiguous cuz meaning of original braille depending on direction but NL braille can have same meaning in any direction.

Sign language is difficult or inefficient for expressing new words or slang but this language is not.

norlang is a binary language so it can easily be converted into NL QR and NL morse and NL braille and sign language and minecraft language and etc and you can learn it easily so you can do many things by learning this language so person who learn this language can easily communicate with the blind and the deaf.

norlang is usually three times more efficient than English.

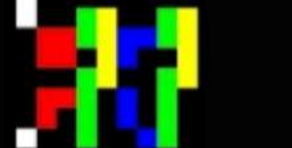

eg 'i know you' in Norlang is 'lbbd'.

English is 80 bits (in ASCII code).

Norlang is 16 bits cuz one letter is 4 bits.

one letter is 8bit in ascii code but norlang can express all meaning using binary.

letter is used for expressing binary and norlang use only binary so it is 4bit.

	
efficient alphabet	
latin alphabet	
NL QR	

The prevention of environmental pollution through norlang is enormous scale.

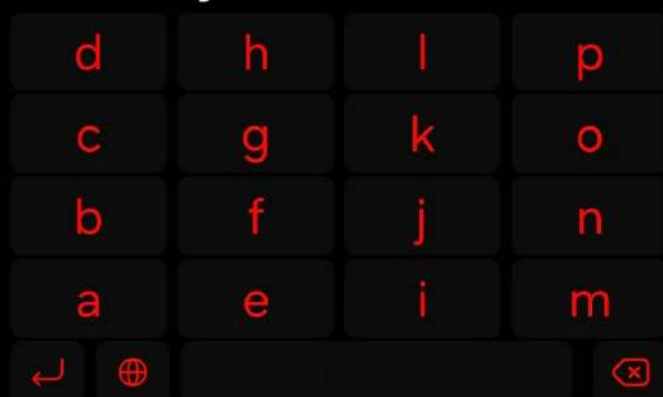

most data in world is video data but if someone speak in norlang, the someone dont need to speak for long time so video become short.

A sentence that takes 10 seconds to say in English can be said in just 5 seconds in Norlang.

norlang is very consistent so polution by AI and LLM will be reduced.

norlang dont have homonyms and synonyms.

keyboard that is for norlang is easy to type cuz it has only 2~16letter.

this language can be unambiguous interpreted without whitespace so it deosnt need hassle mark eg whitespace and hyphen.

This dictionary is very use-ful for learning norlang.

norlang can be International Auxiliary Language cuz it is needed to reduce environmental pollution and make easy communication between disabled people and non-disabled people and support efficient communication.

norlang brings easy communication and peace and helps technology grow.

as a developer, i believe that this language is perfect so don't dislike this language before you are fluent in it.

}persuasion◀

this language is beta version. making this language is started in 2023 year 2 month.

▶alphabet{

*** alphabet is only 0 and 1 then it can be expressed as 16 latin letter.**

a:0000. b:1000. c:0100. d:1100.

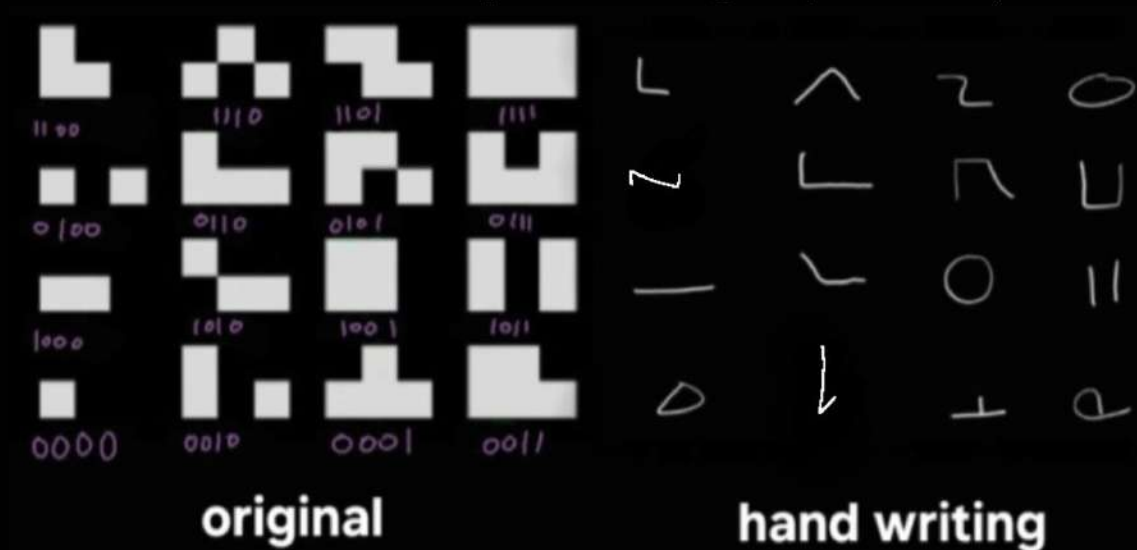

e:0010. f:1010. g:0110. h:1110.

i:0001. j:1001. k:0101. l:1101.

m:0011. n:1011. o:0111. p:1111.

norlang uses only lowercase letters.

more efficient alphabet is here(only pdf user can see. bottom to top writting alphabet):

braille is 2×3 and this alphabet is 2×3 so this alphabet can be used as braille.

one word consist of 8n bit.

8n-th bit determines length of word since it is for

explaining length of word.

* **8n-th bit that is zero** mean that area of this word is finished.

it play role of whitespace of english so norlang dont need whitespace.

eg '1111111**0**' is one word.

it is 'ph' in latin letter.

it means that word that have 2n-th letter that is in between letter 'a'(0000) and 'h'(1110) is consist of smaller bit.

2n-th letter 'h' is in between 'a'(0000) and 'h'(1110).

* **8n-th bit 1** make the word consist of more bit.

'11111111, 1111111**0**' is one word.

the example converted to latin letter is 'ppph'.

norlang dont need whitespace but i will use

whitespace to make you easily understand.

you can learn pronunciation in intermediate section
and i recommend that you read this document in
order.

quiz: How many words does this sentence have?

'mkfdbdoe'.

(1) 1.

(2) 2.

(3) 3.

answer: 3.

}alphabet◀

▶EML(Efficient Memory Language){

▶lecture{

►basic{

- * word order of norlang similar to VOS cuz it is efficient for logical grammar.
- * norlang use function instead of transitive verb.
- * all direct object is called parameter.

so direct object must attach to transitive verb.

- * norlang sentence is list of two objects.
- * in norlang sentence 'A B', if A and B is noun. it mean 'B is A'.

norlang is VOS and english is SVO so subject and object must change each other's location.

'foba' mean 'solid' and it is noun.

'foad' mean 'ore' and it is noun.

what 'foba foad' mean?

- (1) ore is solid.
- (2) solid is ore.
- (3) solid ore.

answer:(1)

* some word must have parameter like function.

function 'jd' must have one parameter.

in 'jd A', 'jd' is function. 'A' is parameter that is in function 'jd'.

'jd A' mean 'thing that Imagine A'.

'bd' mean 'you' so 'jd bd' mean 'thing that Imagine you'.

'oe' mean 'i' and 'me' so 'jd bd oe' mean 'i am thing that imagine you'.

'jd bd oe' mean 'i imagine you' in paraphrase.

FYR: (jd bd) oe.(between '(' and ') is one function.)

'jd bd' is one object since function is object.

* if subject is omitted, subject is 'i' so meaning of sentence 'jd bd' is meaning of sentence 'jd bd oe'.

we use word 'i' lot so this mechanism increace efficiency of language.

but i wont omit subject to make you easily understand.

this grammar can express every meaning.

eg 'The happy boy gives her a small book in the today and smiles.' is expressed as 'mb oihg cd gb if ab elellkkg fjmd lmle ad ab fjde mkcd'.

explaing logical language using unlogical language is difficult so sometime i will use norlang to explain norlang so you should well understand so i need to use part of word dictionary to explain it so you need to know how to interpret a word dictionary.

► How to interpret a word dictionary{

► 'foj**b** !**r**=alive thing.'**{**

word is expressed as it in word dictionary.

* **far left** is norlang word.

* **between '!' and '=** is word type.

* **far right** is meaning of this word.

* 'r' is an abbreviation for 'reality'.

it is type of only word that is not number or etc.

}◀

► 'kjgg !r=dead thing.**//a alive**'{

/// is for an additional explanation.

'a' is an abbreviation for 'antonym'.

* 'a A' mean 'this word is antonym of A'.

* The antonym form is the inversion of the original word's bits.

0 becomes 1. 1 becomes 0.

eg antonym of
'fojb'(10100111,10011000) is
'kjgg'(01011001,01100110).

8n-th bit dont be changed since it is for explaining length of word.

}◀

▶'jd o!r=thing that Imagine A.'{

between norlang word and '!' is parameter type that this function must have.

if it is exist, this word should have parameter.

'o' is an abbreviation for 'object'.

any object can be in object type parameter.

'A' in right of '=' is first inputed object of function.

'jd A' mean 'thing that Imagine A'.

'bd' mean 'you' so 'jd bd' mean 'thing that Imagine you'.

change A into inputed value.

Q: oh this word should have parameter so how to express just 'word image'?

A: 'elea jd', word in parameter of 'elea' deosnt have parameter. this parameter type is called 'int parameter'. If you read further, you can learn it.

I can only answer your question after you know some concept.

► 'da !si=line break'{

'si' is abbreviation for 'sign'.

this word is used to express only line break(aka new line).

'si' type words don't interface with all words.

eg sentence 'jd da bd oe' means 'jd bd oe' because the word doesn't interface with 'si' type words.

}◀

}How to interpret a word dictionary◀

► what 'jd ad oe' mean?{

jd o!r=thing that Imagine A.

ad !si=symbol that omit one parameter.

oe !r=i.//c this,assert,,r this who assert

(1) i imagine.

(2) imagine me!

(3) i imagine me.

(4) imagine of me.

parameter of 'jd' is omitted by 'ad'.

if parameter is omitted, it means 'something'.

answer: (1)

free translation: 'i imagine'.

structure: (jd ad) oe.

translation whose only words are translated:

'(something that imagine something) is me'.

literal translation: i am thing that imagine something.

Q: what is 'r' in right of '//' mean?

A: ignore what you didnt learn. we will learn it.

}◀

}basic◀

▶intermediate{

▶How to interpret a word dictionary{

▶'fc o,o!r=thing that ask B about A.//c
command,reply,{

'!A,B' mean this function need 'A' and 'B' as
parameter.

B is second input object of this function.

third is C. fourth is D...

eg 'fc A B' mean 'thing that ask B about A'.

parameter type that this function must have is
object and **object**.

}◀

▶'ih !n=zero'{

'n' is abbreviation for 'number'.

'ag' ~ 'ph' is number word.

}◀

▶'od !t=now.//c this, time',{

'c' is an abbreviation for 'compound word'.

'c A, B' mean 'this word consist of word A and word B'.

'c A,B' can mean 'this word is compound word of A and B'.

but "c A, B" can mean 'this word is abbreviation for A B'.

'od' is abbreviation for 'oa doea'.

'oa doea' mean 'this time'.

in this case, 'c' used to mean 'abbreviation'.

4bit is from 'oa'(0111,0000).

4bit is from 'doea'(1100,011100100000).

}◀

► 'mkfd o,n!r=thing that love A with B percent power.//c hope,profit,,e The love between a family and a child,,{'

',' finished 'c'.

this symbol is used when word need more explanation.

some english word have lot of meaning so some word have explanation of meaning in additional explanation.

'e' in '//e' is abbreviation for 'explanation'.

//e A' mean that explanation of this word is A.

►'oa o!1p=this A'{

'p' is abbreviation for 'parameter'.

'1p' mean 'first parameter'.

parameter value determines type of this word.

eg 'oa fojb' is reality type cuz fojb is reality type

object.

}◀

▶'gc s,n!p=reason why A2 is A1'{

's' is an abbreviation for 'sentence'.

's' is '<o,o>'.

so 'A1' mean first 'o'.

'A2' mean second 'o'.

}◀

▶'be c o!p=A1 and A2 and....'{

'c A' mean 'this word have A type parameter until it met symbol that omit parameter'.

eg 'be bd bd bd ad' mean 'you and you and you'.

► eoea n!t=Asecond.{

't' is abbreviation for 'time'.

► 'mkid o,n!r=thing that like A.//s love B'{

's A B' mean 'letter of this word is similar to word A of language B'.

if B is omitted, B is norlang.

► 'ma o!1p=all A.//m every'{

'm A' mean that this word can mean A too.

}How to interpret a word dictionary◀

▶ 'mkfd bd oe' {

free translation: 'i love you'.

sturcture: (mkfd bd) oe.

translation whose only words are translated:
'(something that love you) is me'.

literal translation: 'i am something that love you'.

mkfd o,n!r=thing that love A with B percent power.//
c hope,profit,,The love between a family and a child,,

bd !r=you.//a i,

oe !r=i.

as we can see, word 'mkfd' have number type

parameter.

'mkfd bd ih' mean 'thing that love you with zero percent power'.

this expression might be awkward.

'thing that love you with zero percent power' mean 'thing that dont love you'.

ih !n=zero.

in this sentence, 'oe' automatically omit second parameter 'n' of 'mkfd' cuz number type didnt be inputed in the number parameter.

i will explain reason why 'love' is 'c hope, profit'.

Love has various meanings.

There is the love between parents and children, and romantic love.

This word refers to the love between a parent and a child.

mc s,n!r=thing that hope that A2 is A1 by B percent power.

fd n!r=thing that gains profit.

'mc fd A' mean 'thing that hope that A is thing that gains profit'.

FYR: (mc fd A).

parent tend to hope child gain profit since most organism is selfish.

}◀

▶'higina af elga oe'{

free translation: 'my name is higina'.

FYR: higina (af elga oe).

translation whose only words are translated: 'higina

is name of me'.

literal translation: name of me is higinā.

af o,o!1p=A of B.//c A that is B, element,

elga !v=name.

oe !r=i.

reason why 'af' is 'c A that is B, element' is that 'ab A
hc B' mean 'A that is (element of B)'.

ab o-o!1p=A that is B.

hc o!1p=element of A.

'c A that is B, element,' seems 'ah' since first letter of
'ab' and 'hc' is 'a' and 'h'.

i will detaily explain it in advanced section but i
explain reason simply in here.

only number word must be in 'ag' and 'ph'.(eg 'ag',
'bg', 'cg'....'ph')

'ah' is in it so 'ah'(00001110) become 'af'(00001010).

You might feel that some words is weird until reading this document since you dont know word-formation rule but the word-formation rules will be explained in the advanced section in detail so please wait.

}◀

▶how to ask{

▶'fc anga bd oe'{

free translation: 'what is people? i ask you'.

FYR: (fc anga bd) oe.

translation whose only words are translated: '(thing that ask you about people) is me'.

literal translation: i am thing that ask you about

people.

fc o,o!r=thing that ask B about A.//c command, reply,

anga !r=people.

bd !r=you.//a i,

oe !r=i.

if second parameter of 'fc' is omitted, the second parameter mean 'you'.

just saying 'fc anga' is enough.

}◀

▶'fc nb bd bd oe'{

free translation: 'where are you?,i ask you'.

FYR: (fc (nb bd) ad) oe.

translation whose only words are translated: '(thing

that ask you about location of you) is me'.

literal translation: i am thing that ask you about location of you.

nb o!v=location of A.

just saying 'fc nb bd' is enough.

}◀

▶'fc gc dnfd oe bd bd oe'{

free translation:'why do you hate me?'.
FYR: (fc (gc (dnfd oe) bd) bd) oe.

translation whose only words are translated: '(thing that ask you about reason why thing that hate me is you) is me'.

literal translation: i am thing that ask you about reason why you are thing that hate me.

gc s,n!p=reason why A2 is A1.

dnfd o,n=thing that hate A.//c dread,profit,

if second parameter of 'fc' is omitted, it mean 'you' or 'i'(alone imagine).

'gc dnfd oe bd' mean 'reason why you hate me'.

just saying 'fc gc dnfd oe bd' is enough.

► 'fc jf mjme fojb bd bd oe{'

free translation:'what if you give up being worker?'.
FYR: (fc (jf (mjme fojb) bd) bd) oe.

translation whose only words are translated: '(thing that ask you about result if thing that give up being worker is you) is me'.

literal translation: i am thing that ask you about
result if you are thing that give up being worker.

jf s,n!p=result of A2 being A1.//a reason,

mjme o!r=thing that give up being A.//a decide,

fojb !r=alive.

just saying "fc jf mjme fojb bd" is enough.

}◀

▶'fc ja kjca oe bd bd oe'{

free translation: 'are you looking at me?'.
FYR: fc (ja (kjca oe) bd).

translation whose only words are translated: '(thing
that ask you about whether thing that see me is you)
is me'.

literal translation: i am thing that ask you about whether you are thing that see me.

ja slr=whether A2 is A1.

kjca olr=thing that see A.//c sense,photon,.

just saying 'fc ja kjca oe bd' is enough.

}

▶ 'fc ec gjfg oa anga boba'{'

free translation: 'how do we save this person?'.
FYR: fc (ec (gjfg (oa anga)) boba).

translation whose only words are translated: '(thing that ask you about how thing that save this people become we) is me'.

literal translation: i am thing that ask you about how

we become thing that save this people.

ec s-n!r=how A2 become A1.//c what,need to,.

gjfg o,n!r=thing that save A.//c cause,alive,.

oa o!p=this A.

boba !r=we.//c and,i,you,o,.

► 'fc ekfb kjgg'{'

free translation: 'how to dead?'.
FYR: fc ekfb kjgg.

translation whose only words are translated: '(thing that ask you about how to become dead) is me'.

literal translation: i am thing that ask you about how to become dead.

ekfb o-n!1p=how to become A.//c how,normal,

'how to open this' is considered as 'how normal thing open this' in norlang.

▶ 'fc ee de id boba'{'

free translation: 'when we sense each other?'.
FYR: fc (ee (de id) boba).

translation whose only words are translated: (thing that ask you about time when thing that sense each other is we) is me'.

literal translation: i am thing that ask you about time when we are thing that see each other.

ee s!t=time when A2 is A1.//c what,thing that be B when A,

id !r=each other.//c what,interface,self,.

}◀

}how to ask◀

▶'kjca cf gjif olib bd fjmd oe'{

free translation: 'I see her giving you food'.

FYR: (kjca (cf (gjif olib bd) fjmd)) oe.

translation whose only words are translated: '(thing that see (situation that thing that give food to you is she)) is me'.

literal translation: i am thing that see situation that she is thing that give you food.

kjca o!r=thing that see A.//c sense,photon,.

cf s!r=situation that A2 is A1.

gjif o,o,n!r=thing that give A to B.//c cause,have,

olib !r=food.

fjmd !r=she.//c the,women,.

reason why word 'give' is 'c cause,have,' is following.

word 'cause' in additional expression mean this
word 'gb <o-o>-n!r=thing that cause A to become B.//
s reason,'.

if o!r=thing that have A.//a element,

'gb if A B' mean 'thing that cause B to become thing
that have A'.

}◀

literal translation: i am thing that hate you and thing that hate you.

be c o!p=A1 and A2 and....

in this situation, it should omit two parameter so 'bc' is used instead of 'ad'.

the first omitted parameter is 2nd parameter of

'dnfd'.

second omitted parameter is parameter of 'be'.

}◀

}symbol that omit parameter◀

▶'nnga ma bd oe' {

free translation: 'hello everyone'.

FYR: (nnga (ma bd)) oe.

translation whose only words are translated: 'thing
that greet all you is me'.

literal translation: i am thing that greet all you.

nnga o!r=thing that greet A.

ma o!p=all A.//m all,

bd !r=you.//a i,

►pronunciation{

* Two letters make one syllable.

* $(2n-1)$ th letter is pronounced as initial consonant.

* $2n$ -th letter is pronounced as vowel also final consonant.

eg 'bb fh anba' is pronounced as 'bo rwo memboo'.

'b' is 'b', 'o' in pronunciation chart.

if 'b' is in $(2n-1)$ -th letter then it pronounced as 'b'.

if 'b' is in $2n$ -th letter then it pronounced as 'o'.

$(2n-1)$ th letter 'f' is pronounced as 'r'.

$2n$ -th letter 'h' is pronounced as 'wo'.

then 'anba' is pronounced as 'memboo' then it can be pronounced as 'meb'.

►pronunciation chart{

sound consists of decibels (dB) and hertz (Hz).

it is arranged with lower Hz sounds coming first.(eg m(100hz) < s(14000hz))

so it is not biased toward any specific culture.

a:'m', 'oo'. b:'b', 'o'. c:'d', 'eo'. d:'g', 'eu'.

e:'n', 'a'. f:'l', 'e'. g:'pp', 'i'. h:'tt', 'wo'.

i:'kk', 'oom'. j:'p', 'om'. k:'t', 'eom'. l:'k', 'eum'.

m:'j', 'am'. n:'jj', 'em'. o:'ch', 'im'. p:'s', 'wae'.

m as in mom. b as in bee. d as in doctor. g as in goal.

n as in no. l as in ling. p as in polar.

eu in bro.(silent vowel)

►IPA version{

a: /m/, /u/. b:/b/, /o/, . c: /d/, /ʌ/. d: /g/, /ʊ/.

e:/n/, /a/. f: /r/, /ɛ/. g: /p/, /i/. h: /t̪/, /wʌ/.

i: /k/, /um/. j: /p/, /om/. k: /t/, /ʌm/. l:/k/, /ʊm/.

m:/tʃ/, /am/. n: /tʃ/, /ɛm/. o:/tʃ/, /im/. p: /s/, /wɛ/.

}IPA version◀

}pronunciation chart◀

initial consonant that is easy to distinguish is 19.

vowel that is easy to distinguish is 10.

silent sound and h aren't used cuz it make problem.

The pronunciation [ma] is made by quickly saying

[m] and [a].

The pronunciation [ta] is made by quickly saying [d] and [ha].

I think adding silent sounds and h would make the language inconsistent and unlogical.

i allow that user freely pronounce so It doesn't matter whether you pronounce the 'r' in a Spanish, German, or British accent/pronunciation.

if word is long then there are final consonant 'm'.

This mechanism makes long word difficult to say so user dont wanna made long word so it becomes efficient.

There is way to express all pronunciations in norlang so dont worry.

}pronunciation◀

kjca o!r=thing that see A.//c sense,photon,

inef !r=country.//c group,big,

}◀

▶'ob fjde fnjb oe'{

free translation: 'i work with he'.

FYR: (ob fjde fnjb) oe.

translation whose only words are translated: thing
that is worker with he is me.

literal translation: i am thing that worker with he.

ob o,o,n!p=thing that is B with A.

fnjb !r=work.

}◀

▶'ef eoof of bd oe'{

free translation: i go to you by car

FYR: (ef eoof (of bd)) oe.

literal translation: i am thing that go to you by car.

ef o,o,n!2p=thing that is B by A.

eoof !r=vehicle.//c machine,move,

}◀

▶'kb ca anga oe fjde'{

free translation: he express me as person.

FYR: (kb (ca anga oe)) fjde.

literal translation: he is thing that express me as person.

kb o!r=thing that express A.

ca o,o!1p=B as A.

}◀

▶'mkfd bd lh oe'{

free translation: 'i love you by 100percent'.

FYR: (mkfd bd lh) oe.

lh !n=one.

second parameter of 'mkfd' is 'intensity of love'.

1 is 100percent.

0.5 is 50percent.

}◀

}preposition◀

▶adjective{

'ab mipa foad oa{'

FYR: (ab mipa foad) oa.

literal translation: this is green ore.

ab o,o!1p=A that is B.

mipa !r=green.

foad !r=ore.

green ore is green that is ore.

if you think that it is efficient, then you can make compound word.

the result is 'mipifoad',

'eye doctor' dont mean 'eye that is doctor'.

'eye doctor' mean 'doctor that promise to fix eye'.

it is 'ab doee doba gjfg hlca'.

doee !r=doctor.//c promise,fix,organism,

doba o,o,o!r=thing that promise that B if myself is A
then B becomes C.

gjfg o,n!r=thing that fix A.//c cause,profit,

hlca !r=eye.//c engine,sense,photon,

but is is inefficient so it become compound word.

the result is 'doemhlca'.

'doemhlca' is compound word of 'doctor' and 'eye'

and compound word of 'eye' and 'doctor' is prohibited cuz in compound word function must be in after if order is not matter(eg 'A that is B' is 'B that is A' so it is order is not matter)

'hlca' is not function but in definition, it is in parameter of function.

}adjective◀

adverb word have adverb.

'gmkg jobk anga ad oe' mean 'i quickly kill person'.

some people think that this conlang is inefficient

this conlang sentence consist of 16 letter and subject can be omitted.

this english sentence consist of 20letter.(english need whitespace so including whitespace)

'gmkg jokb anga bd oe' mean 'i quikly kill person tham you'.

}adverb◀

explanation of interjection is in advanced section.

this language can express interjection 'wow'

▶How to interpret a word dictionary{

▶'pf !o=it{

'o' type word can be in any parameter type.(eg r,n,t)

}◀

}how to interpret a word dictionary◀

►how to use word 'ea'{

word 'ea' is similar to 'what' as in 'what i love'.

lets assume i love you.

'i love you' is 'mkfd bd oe'.

'what i love is you' is 'bd ea lh mkfd oe' or 'bd ea mkfd pa oe' or 'bd ea mkfd oe'.

as for first expression 'bd ea lh mkfd oe'.

'lh' mean one so word 'ea' return first parameter of 'mkfd'.

this number must attach to word 'ea' and be in next of word 'ea'.

as for second expression 'bd ea mkfd pa oe'.

word 'pa' is in first parameter of 'mkfd' so word 'ea'

return first parameter of 'mkfd'.

as for third expression 'bd ea mkfd oe'.

there are no number and word 'pa' so word 'ea'
return first parameter of 'mkfd' automatically.

word 'mkfd' have two parameter.

'mkfd bd lh oe' mean 'i love you 100percent'.

'bd' and 'lh' is in parameter of 'mkfd'.

if word 'ea' target second parameter then it is 'How
much I love you'.

'ea nh mkfd bd oe' mean 'How much I love you'.

if you think that this expression is inefficient then
you can use word 'he'.

word 'he' is 'ea nh'.

'he mkfd bd oe' mean 'ea nh mkfd bd oe'.

as for how to express person that i love.

"ab anga ea mkfd oe' mean 'person that is what i love' and 'person that i love' or 'lovely person'.

it is little inefficient so we can use word 'ae'.

'ae anga mkfd oe' mean 'ab anga ea mkfd oe'.

'people that i loved' is 'ae nh anga ed mkfd oe'.

the number must attach to word 'ae' and be in next of word 'ae'.

this expression seems inefficient so we can use word 'ne'.

word 'ne' mean 'ae nh' so "ne anga ed mkfd oe' mean 'ae nh anga ed mkfd oe'.

well... how to express 'my hope is none'.

it is 'ga ad he mc ff oe'.

'ga' mean 'only'.

'gaad' mean 'undefined'.

'ff' mean 'true'.

i hope you already undertand why the sentence mean 'my hope is none'. you can underatand using only what i said.

you can use word 'pc' to explain it.

'ga ad ea mc pc oe' mean 'my hope is none'.

word 'pc' is word 'pa' that target sentence.

}how to use word 'ea'.◀

▶comparative{

▶'mkfd bd pg fjde oe'{

free translation: 'I love you as much as I love him'.

translation whose only words are translated:

pg o!n=A that is converted into number.//c B
converted into A,number,

fjde !r=he.//a she,

if word that is not a numeric type is in parameter of
'pg', it automatically converted number.

'pg fjde' converted into 'pg he mkfd fjda oe'.

it tend to target number.

FYR: (mkfd bd (pg fjde)) oe.

►'mkfd bd fh fjmd oe'{

free translation: 'i love you more than she'.

translation whose only words are translated:

fh o!n=thing that is more than A.//a less,

▶advanced{

▶How to interpret a word dictionary{

▶'fg dec!n=decimal number'{

'dec' is abbreviation for 'decimal number'.

this word is for expressing decimal number.

4bit express one number.

'fg ja' mean 9.

'j' in dec is 1.

'a' finish parameter dec.

'b' is 1.

'c' is 2.

'd' is 3.

'e' is 4.

'f' is 5.

'g' is 6.

'h' is 7.

'i' is 8.

'j' is 9.

'k' is 0 since if 'a' is '0' it can't be visible in NL QR.

'fgbcda' is 321.

'b' is 1. 'c' is 2. 'd' is 3.

so it seems 123 but this language uses little andian
so it is reversed.

}◀

▶ah dec,dec!n=decimal rational number.{

first 'dec' is fractional part.

norlang emphasizes efficiency.

expressing fractional part firstly is efficient when
expressing 0.5 because it does not need to express

integers.

► 'bg int!n=integer'{

'int' is an abbreviation for 'integer'.

'int' is for expressing only integer.

so code in int dont make parameter.

'bg' express integer number.

eg 'bg he' is 35.

first bit determines whether the number is positive or negative.

if first bit is zero, number is negative.

integer 'he' is '111000010'.

(2nd bit)*1=1.

(3rd bit)*2=2.

(4th bit)*4=0.

(5th bit)*8=0.

(6th bit)*16=0.

(7th bit)*32=32.

1+2+32=35.

so it is 35.

if u wanna express negative then reverse all bit.

}◀

▶'//b A{'

'b' is abbreviarion for 'before'.

'b A' mean that this word is before word of A.

►'foea n!t=A minute.//n second,{

'n' is abbreviation for 'next'

'n A' mean that this word is next word of A.

word 'eoea' mean second.

next letter of 'e' is 'f' so next word of 'eoea'(second) is 'foea'(minute) so 'foea' mean 'minute'.

►'//p A B'{

'p' is an abbreviation for 'pronunciation'.

'p A B' means that the pronunciation of this word is derived from the word A of language B.

language name of ISO code alpha2 is in B.

if it is omitted, it is norlang.

}◀

▶'//r'{

'r' is abbreviation for 'reason'.

'r' is used to explain why this word is made this way.

}◀

▶'//d'{

it mean when was this word created.

If it was created a long time ago, it's highly likely that it won't change in the future.

'//pd' mean predicted made date.

}◀

▶'//u'{

it mean when was this word updated.

If it was updated a long time ago, it's highly likely that it won't change in the future.

'//pu' mean predicted update date.

}◀

▶'bg n,str...!r//e this word is for expressing text.'{

parameter int ≠ parameter str.

parameter 'str' is used to express string.

[i say his name] have different meaning from [i say 'his name'].

str that have 8n-th bit that is 1 dont become longer
unlike parameter int.

'...' in right of str is the quantity of parameter is
determnined by number that is around.

eg 'bg lh ba' is text 'ba'.

eg 'bg nh baba' is text 'baba'.

}◀

}how to interpret a word dictionary◀

▶word formation rule{

▶'gjfg o,n!r=thing that save A.//c cause, alive'{

antonym of save is kill.

we learned int type parameter.

if bits of word alive and dead is converted into number, it is 'fojb(1010011110011000) < kjgg(0101100101100110)'.

word alive is smaller than word dead if it is converted into number.

compound word that have antonym is made by small bit word.

word 'kill' can be 'c cause,dead' but alive have smaller bit than dead so word 'kill' is made as antonym.

}◀

▶'jf s,n!r=result of A2 being A1.//a reason',{

gc s,n!r=reason why A2 is A2.

'gc' is '0 1 1 0 0 1 0 0'.

'jf' is '1 0 0 1 1 0 1 0'.

word reason is randomly made.

The reason happens before the result, so the word "reason" was created earlier than the word "result." so word reason that converted to numbers must less than word result that converted to number.

* antonym should have bigger bit than original word that is randomly made.

}◀

►'oidd o,o,n=thing that need to be A to be B,//c
need,A that is B,self,.'{

oilb o,o,n!r=thing that need A to be B.

ab o,o!r=A that is B.

dd !r=self.//c Ath subject,one,

reason why word 'oidd' is 'c need,A that is B,self,' is

'oilb ab dd A B' mean 'thing that need (oneself that is A) for being B'.

This expression is a bit awkward so i will explain with an example.

sentence 'oilb ab dd A B C' mean 'C need C that is A to be B'.

The floor of 16 divided by 3 is 5 but this compound word is not made by 5bits cuz the length of element word in the compound word must be a power of 2.

so 'oidd' is $0111 + 0000 + 11001100$.

8th bit become 1.

as i mentioned, 'c' can mean abbreviation.

'i dislike being people' can be translated into 'dnfd ab dd anga oe'.

► 'hnmc !r=music.//c sound,pleasure,'{

'sound that i feel pleasure from' is expressed as 'ae hnih mkcd oe'.

but if this word is made by 4 words then people cant know element word.

important word in it is 'hnih'(sound) and 'mkcd'(pleasure).

it is made by the two words.

it is abbreviation.

new word should make element of new word remain order of original expression so this compound word must compound word of 'sound' + 'pleasure' instead of 'pleasure' + 'sound'.

}◀

► 'dnfd o,n!r=thing that hate A.//c dread, profit,'{

why word is not antonym of love.

if it is made by antonym then it is dnke so form and sound of it is similar to dfke and meaning of dfke similar to love cuz it mean thing that dread that something become victim.

}◀

►suffix{

►how to express -ing{

You should think about how what you are trying to express is represented in reality or as a picture

Language exists to express reality, so we should convert what "-ing" means in reality into reality.

The English suffix “-ing” is an inconsistent

expression.

In the sentence "I am going home," "-ing" represents a change.

this sentence mean 'i moving to coordinate 1, then to 2, and then to 3'.

it can be expressed as "thing that becoming thing that went home".

However, 'i am standing' is not change.

"I am wearing clothes," "-ing" is not change.

"i am wearing clothes" dont mean "I am thing that becoming thing that wear clothes."

'i wear clothes' mean 'i become thing is weaing clothes'.

if you thought language that is converted into reality, then you will agree.

mp- is ing eg mpjokb is killing.

}how to express -ing◀

▶how to express noun that dont have actor{

kb o!r=thing that express.

thing that express is actor.

word expression dont have actor.

use input 'jp-' into first.

'jpkb' mean expression.

how to express 'killed'?: ea jobk ha.

}how to express noun that dont have actor◀

▶ -est{

}est◀

}suffix◀

}word formation rule◀

▶number{

'ag'~'ph' is number word.

▶efficient number{

ih~ph is for efficient number.

it is for efficient.

ih !n=zero.

lh !n=one.

binary of 'lh' is '11011110'.

first bit is sign of number.

1 make positive number.

0 make negative number.

2~3th bit is absolute value.

so

nh !n=two

ph !n=three.

if first bit is 0 then result is following.

kh !n=minus one.

mh !n=minus two.

oh !n=minus three.

i didnt say 'jh'.}it seems zero but zero is already exist
so it is four.

and i effort to make only latin letter is in definition
so i didnt use number symbol.

}efficient number◀

▶'ag da', 'lh'='1'{

see between '(' and ')' in next.

'ag da' is '10000110,(110)00000'.

'lh' is '(110)11110'.

'ih'~'ph' is 'eni'(efficient number integer).

}◀

▶'ag fa lh'='1.25'{

ag int- $n!$ n =rational number.

'fa lh'='10100000.11011110'.

lh ! n =one.

'fa' is in small number area.

}◀

}number◀

►word 'bb' and 'ib'{

bb o! v =result value of A.

ib o!v=freezed word A.

'ja lh lh' mean 'whether one is one'.

sentence 'whether one is one is true' is true.

sentence 'whether one is one is whether one is one' is true.

so we can know 'ja lh lh' can mean 'true' and 'whether'.

but 'bb ja lh lh' mean only 'true' so 'eb lb ja lh lh oe' mean 'i dont know true'.

'ib ja lh lh' mean only whether.

}word 'bb' and 'ib'◀

▶word 'db' and 'dd'{

db n!v=Ath subject.

'lb cf mkfd db lh oe bd' mean 'you know that i love me' cuz 'oe' is in first subject and 'db lb' mean first subject.

'lb cf mkfd db nh oe bd' mean 'you know that i love you' cuz 'bd' is in second subject.

if parameter of db is omitted, it automatically target second subject'.

dd !r=self.//c Ath subject,+1eni,

'dd' and 'db lh' have same meaning.

'dd nh' and 'db' have same meaning cuz if parameter is omitted, the parameter automatically mean 'nh'.

norlang use this word as 'myself' or 'themselves' etc.

}word 'db' and 'dd'◀

▶word hb{

▶rule{

This language is not complete and it can be changed so you should indicate the version when using it like 'nl60125'(6m1d25y) month->day->year.

all word should have same meaning in everywhere.

▶number{

'x1000010'

if x is 0, minus.

if x is 1, plus.

before bit is small.

it is efficiency.

10000000=+0.

11000000=+1.

01000000=-1.

}number

►reading way in NL QR{

in 1 dimension, '10' is at first for expressing reading direction.

in other dimension, it is

'10000011'.

or

'1011000000000011'

read like  

rows should not 8,

}reading way in NL QR

►for developer{

The efficiency of inaccurate expressions and accurate expressions

pronunciation that have low herz is in first.

exact expression is important than efficiency.

one sentence must mean only one mean.

purpose of language is only communication and efficient.

0 dont be used for counting order.

exception must be none.

relative things must have standard.

sentence 'anga oa' means 'i have features of people'.

logic of sentence{

left of nl sentence have smaller concept.

}logic of sentence

►word formation rule{

word that need parameter{

meaning of word whose all or nothing is in
parameter is what other word can express

word that dont have features.

relative word.

word that need standard

transitive verb.

very unefficient.

word whose numeral is not useful.

}word that need parameter

random word{

initial of word should be similar to initial of word that have similar meaning.(eg word like and pleasure have similar initial)

}random word

►antonym{

bit of antonym is inverse of original word so 0 become 1, 1 become 0.

antonym that should be made first{

low number(eg word below is before antonym of word more).

thing that is made first(eg seller exist to make buyer,, women is made before men exist)

original(eg 'df' mean 'meeb' so 'me' is first).

many quantity(eg photon is manner than neutrino).

}antonym that should be made first

if specific word have lot of antonym, order of antonym that should be made first is 'first exist(no slave,no king)->low number(0% can=cant)->purpose(weapon,treatment tool,,intend,evolution)->difference set(dont know,know)'.
}

antonym of specific compound word dont following rule 'word that should come first' so many quantity word can have big bit.

antonym form should not same as antonym converted into compound word(eg word 'forgot' that made by antonym mechnism)

}antonym

►compound word{

'girlfriend' = 'c women, love' cuz original expression is 'ae mlmb mkfd'. it should keep original expression.

value is first than function.

compound word consist of word that is more basic first.

if new compound word overlap with other compound word, first element word of new compound word become small. (eg '00,10' become '0,1'. but if length of area of element is 1, use XOR).

length of bit of element of compound word must power of two.

if quantity of element word is less than 4, then element of compound word such as symbol that omit parameter, ea, of, and, or, also is in start or end, it is omitted.

less bit word of compound word is first in situation whose order doesn't matter but we should avoid the situation first.

compound word consist of less word first so we shouldnt use antonym as element of compoun word

firstly.

if length of element compound word of compound word is less than whole bit divided by 8, and new word should be expressed as antonym of this word, use antonym mechanism.

In compound words, those made up of fewer visible elements become split first.

function word is before.

first action word is made first, if it is advantageous (eg remember is first, then forgot).

}compound word

►phonetic loanword{

'russia' -> 'rossiya' (russia in russian. silent consonant becomes 'n').

'higgs particle' -> 'kims' ('h' -> 'k').

}phonetic loanword

word formation rule that should be used first{

If a word can be expressed as an antonym and also as a compound word.

if word created by the antonym mechanism has the same meaning as the original word(eg mkfd=dnfd) then use compound word mechanism.

If the original word too similar to compound wkrd, use antonym mechanism(eg i(com expres,this,o) -> you(com sense, this, o))

If the bits of a word expressed as a compound word differ by less than 1/4 from its antonym, use the antonym mechanism..

and If a compound word consists of two words, use the compound word mechanism first using their antonym.(eg mkfd->dnfd)

If not, use the antonym mechanism first.

}word formation rule that should be used first

}word formation rule

}for developer

▶user{

you cant edit norlang(eg u cant chaiging grammar)
but you can make new word but the new word must
be noun and it is not official.

you should request to me to make function word.

}user

language.

}license

}rule

▶other{

It is almost complete, but I am having particular difficulty completing the pronunciation chart.

if norlang have problem norlang is changed never mind other.

Creator Verification Code:'@@0226@0@@@2@.
pn:@@05139@@@8 in 2024/11/18. JSM, SE,
GIGADESADE, GOHW, SEMI, 1@@15@@7@@@@'.

prohibits anything similar to this.

dont make NL lite that have only few word cuz i making it.

►history{

I like science so i readed too many science document.

but in scientific documents that is written by natural language, there are many bad expression.

they use the word 'big' and 'cold' without expressing standard and they use word and grammar in weird way.

There are also many ambiguous expressions.

the writer use word in wrong way.

I intended to think about reason why there are many bad expression.

the reason is that people use inferior language.

if you use word big with standard, then the expression become very inefficient so many people dont explain standard.

I've learned that language can be much simpler by reading scientific documents frequently.

and I believed that inferior language very harmful mankind so I decided to make new language.

I'll say history but I don't know detail date.

►prediction{

in 6 month 2022 year I thought that new language is needed.

in 9 month 2022 I used my own temporary symbol for expressing science.

in 10 month 2022 I thought that verb must be in first since verb is important for grammar.

I decided to make new language in 1 month 2023 year.

in 1m 2023 I decided to make VSO language since it make we don't need to distinguish transitive verb in

sometime.

VSO and logical grammar is very inefficient so i decide to make binary language in 2023y5m.

i decided to use binary language that similar to morse code 7m d 2023y.(video that use morse code to express norlang from 2023y 7m 16d is confirmed)

i gave up use morse code for my conlang in 2023y 11m 20d.

i thought about VSO sentence 'ask i people' then i thought that if my conlang use VOS, then it is efficient since it dont need to mention subject. but how to make Rationale?' so i made function-noun grammar system. VOS is finalization in 3m 2024.

NL QR is made in 2024y 3m.(video that use NL QR2 and VOSfrom 2024y 3m 15d 18h 2mi is confirmed)

in 2024y 4~7m i gave up making conlnag since i think that my purpose is imposible since i intended to make language that is same in every civilization including outerspace i thought how elilian made

language and absolute language in mathematical and logical way since i belived that only one binary language must be exist.

i decided to retry make language since my conlang is too helpful for enviroment in 2024y 7m.

in 9, 12 month 2024y 1, 2m 2025 i remade all words when wrting system or word formation rule is changed i did it 4times until i make norlang. there are many words but i remade so i was painful.

in 12day 10month 2024year i published my conlang and i got criticized.

antonym mechanism is finalization in 3m 2025.

2025y 4m, compound word rule is confirmed.

NL QR have some change so it become finalization in 2025 5m.(video that use NL QR2 from 2025y 6m 15d 20h 1mi is confirmed)

starting perfectizing language in 5m 2025.

}prediction

}history
